

Lala : Server Foundation & Task 1

- **Responsibility:** Basic single-client server
- **Tasks:**
 1. Create server socket listening on given port
 2. Accept one client connection
 3. Echo received messages to server CLI
 4. Handle client termination ("terminate" command)
 5. Command-line argument: port

Vihanga : Client Foundation & Task 1

- **Responsibility:** Basic single-client publisher/subscriber client
- **Tasks:**
 1. Create client socket connecting to server (IP + port args)
 2. Send user input from CLI to server
 3. Run until "terminate"
 4. Command-line arguments: server IP, port

Pasan : Multi-client Server (Task 2)

- **Responsibility:** Extend server to handle multiple clients
- **Tasks:**
 1. Implement threading/select() for concurrent connections
 2. Store connected clients in lists (publishers[], subscribers[])
 3. Forward messages from any publisher to all subscribers
 4. Ignore sending to publishers

Sewmini : Role-based Client (Task 2)

- **Responsibility:** Extend client to be publisher/subscriber
- **Tasks:**
 1. Add 3rd CLI argument: PUBLISHER or SUBSCRIBER
 2. Modify client behavior based on role
 3. Ensure subscriber clients can receive broadcasted messages
 4. Test with multiple client instances

Ridma : Topic-based Server Routing (Task 3)

- **Responsibility:** Implement topic filtering on server
- **Tasks:**
 1. Maintain dictionary: {topic: [subscriber_sockets]}
 2. Route messages from publisher on TOPIC_A only to subscribers of TOPIC_A
 3. Handle multiple topics concurrently
 4. Allow clients to specify topic as 4th CLI argument

Pevindi : Topic-based Client & Integration (Task 3)

- **Responsibility:** Extend client for topics + final integration
- **Tasks:**
 1. Add 4th CLI argument: topic name
 2. Modify client to send/receive based on topic
 3. Help integrate all modules
 4. Write final cleanup and termination logic
